ALL RIGHTS RESERVED

No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1983 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

# CONTENTS OF VOLUME 53

## Number 1, January 1983

R. A. Craig, R. T. Reynolds, B. Ragent, G. C. Carle, F. Woeller, and J. B. Pollack. Sulfur Trioxide in the Lower Atmosphere of Venus? ..... 1

Godfrey T. Sill. The Clouds of Venus: Sulfuric Acid by the Lead Chamber Process ..... 10

R. P. Turco, O. B. Toon, R. C. Whitten, and R. G. Keesee. Venus: Mesospheric Hazes of Ice, Dust, and Acid Aerosols ..... 18

Patrick Cassen and Audrey Summers. Models of the Formation of the Solar Nebula ..... 26

G. E. Morfill. Some Cosmochemical Consequences of a Turbulent Protoplanetary Cloud ..... 41

J. Henrard. Orbital Evolution of the Galilean Satellites: Capture into Resonance 55

B. Lago and A. Cazenave. Evolution of Cometary Perihelion Distances in Oort Cloud: Another Statistical Approach ..... 68

Nicole Borderies, Peter Goldreich, and Scott Tremaine. The Variations in Eccentricity and Apse Precession Rate of a Narrow Ring Perturbed by a Close Satellite ..... 84

D. P. Cruikshank, J. F. Bell, M. J. Gaffey, R. Hamilton Brown, R. Howell, C. Beerman, and M. Rognstad. The Dark Side of Iapetus ..... 90

Quinn R. Passey. Viscosity of the Lithosphere of Enceladus ..... 105

R. Courtin, D. Gautier, A. Marten, and V. Kunde. The $^{12}C/^{13}C$ Ratio in Jupiter from the Voyager Infrared Investigation ..... 121

John Caldwell, Alan T. Tokunaga, and Glenn S. Orton. Further Observations of 8-$\mu$m Polar Brightenings of Jupiter ..... 133

A. T. Tokunaga, G. S. Orton, and J. Caldwell. New Observational Constraints on the Temperature Inversions of Uranus and Neptune ..... 141

Stuart Bowyer, Gerry Zeitlin, Jill Tarter, Michael Lampton, and William J. Welch. The Berkeley Parasitic SETI Program ..... 147

Note

S. P. Synnott, R. J. Terrile, R. A. Jacobson, and B. A. Smith. Orbits of Saturn's F Ring and Its Shepherding Satellites ..... 156

Book Reviews

Owen B. Toon. *Clouds: Their Formation, Optical Properties and Effects.* Edited by Peter V. Hobbs and Ardash Deepak ..... 159

Peter Thomas. *The Cambridge Encyclopedia of Earth Sciences.* Edited by D. G. Smith ..... 160

## Number 2, February 1983

Introduction

Joseph Veverka. Special Issue on Saturn ..... 163

Donald E. Osterbrock and Dale P. Cruikshank. J. E. Keeler's Discovery of a Gap in the Outer Part of the A Ring ..... 165

KARI LUMME, WILLIAM M. IRVINE, AND LARRY W. ESPOSITO. Theoretical Interpretation of the Ground-Based Photometry of Saturn's B Ring ..... 114
FRANK H. SHU, JEFFREY N. CUZZI, AND JACK J. LISSAUER. Bending Waves in Saturn's Rings ..... 115
RICHARD GREENBERG. The Role of Dissipation in Shepherding of Ring Particles .. 217
C. K. GOERTZ AND G. MORFILL. A Model for the Formation of Spokes in Saturn's Ring ..... 219
G. E. MORFILL, E. GRÜN, C. K. GOERTZ, AND T. V. JOHNSON. On the Evolution of Saturn's "Spokes": Theory ..... 230
D. A. GURNETT, E. GRÜN, D. GALLAGHER, W. S. KURTH, AND F. L. SCARF. Micron-Sized Particles Detected near Saturn by the Voyager Plasma Wave Instrument ..... 236
W. S. KURTH, D. A. GURNETT, AND F. L. SCARF. A Search for Saturn Electrostatic Discharges in the Voyager Plasma Wave Data ..... 255
R. A. HANEL, B. J. CONRATH, V. G. KUNDE, J. C. PEARL, AND J. A. PIRRAGLIA. Albedo, Internal Heat Flux, and Energy Balance of Saturn ..... 262
B. J. CONRATH AND J. A. PIRRAGLIA. Thermal Structure of Saturn from Voyager Infrared Measurements: Implications for Atmospheric Dynamics ..... 286
GLENN S. ORTON. Thermal Infrared Constraints on Ammonia Ice Particles as Candidates for Clouds in the Atmosphere of Saturn ..... 293
ROBERT A. WEST. Spatially Resolved Methane Band Photometry of Saturn. II. Cloud Structure Models at Four Latitudes ..... 301
GARY MELNICK, RAY W. RUSSELL, TIMOTHY R. GOSNELL, AND MARTIN HARWIT. Spectrophotometry of Saturn and Its Rings from 60 to 180 Microns ..... 310
STEVEN W. SQUYRES, RAY T. REYNOLDS, PATRICK M. CASSEN, AND STANTON J. PEALE. The Evolution of Enceladus ..... 319
MERTON E. DAVIES AND FRANK Y. KATAYAMA. The Control Networks of Mimas and Enceladus ..... 332
DAVID J. THOLEN AND B. ZELLNER. Eight-Color Photometry of Hyperion, Iapetus, and Phoebe ..... 341
G. F. LINDAL, G. E. WOOD, H. B. HOTZ, D. N. SWEETNAM, V. R. ESHLEMAN, AND G. L. TYLER. The Atmosphere of Titan: An Analysis of the Voyager 1 Radio Occultation Measurements ..... 348
ROBERT E. SAMUELSON. Radiative Equilibrium Model of Titan's Atmosphere .... 364

NUMBER 3, MARCH 1983

V. G. TEIFEL. Methane Abundance in the Atmosphere of Uranus ..... 389
R. G. FRENCH, J. L. ELLIOT, E. W. DUNHAM, D. A. ALLEN, J. H. ELIAS, J. A. FROGEL, AND W. LILLER. The Thermal Structure and Energy Balance of the Uranian Upper Atmosphere ..... 399
PAUL HELFENSTEIN AND E. M. PARMENTIER. Patterns of Fracture and Tidal Stresses on Europa ..... 415
C. F. YODER, G. COLOMBO, S. P. SYNNOTT, AND K. A. YODER. Theory of Motion of Saturn's Coorbiting Satellites ..... 431
DAVID W. HUGHES AND PAUL A. DANIELS. The Secular Variation of Cometary Magnitude ..... 444

Francisco Valdes and Robert A. Freitas, Jr. A Search for Objects near the Earth–Moon Lagrangian Points ..... 453
V. Zappalà, M. Di Martino, F. Scaltriti, G. Djurašević, and Z. Knežević. Photoelectric Analysis of Asteroid 216 Kleopatra: Implications for Its Shape 458
Peter Nisenson, Jerome Apt, Richard Goody, and Costas Papaliolios. Speckle Imaging for Planetary Research ..... 465
James F. Kasting and James B. Pollack. Loss of Water from Venus. I. Hydrodynamic Escape of Hydrogen ..... 479
V. I. Moroz, A. P. Ekonomov, Yu. M. Golovin, B. E. Moshkin, and N. F. San'ko. Solar Radiation Scattered in the Venus Atmosphere: The Venera 11, 12 Data ..... 509
John C. Good and F. Peter Schloerb. Limits on Venus' $SO_2$ Abundance Profile from Interferometric Observations at 3.4. mm Wavelength ..... 538

Note
Thomas A. Croft and Gary H. Price. Evidence for a Low-Altitude Origin of Lightning on Venus ..... 548

Book Review
William K. Hartmann. *The Comparative Study of the Planets*. Edited by Angioletta Coradini and Marcello Fulchignoni ..... 552

Author Index for Volume 53 ..... 553

The Subject Index for Volume 53 will appear in the December 1983 issue as part of a cumulative index for the year 1983.

## INFORMATION FOR AUTHORS

ICARUS is devoted to the publication of original contributions in the field of solar system studies. Manuscripts reporting the results of new research—observational, experimental, or theoretical—concerning the astronomy, geology, meteorology, physics, chemistry, biology, and other scientific aspects of the solar or extrasolar systems are welcome. The journal generally does not publish papers devoted *exclusively* to the Sun, the Earth, celestial mechanics, or astrophysics. The preferred language of publication is English, but in special cases manuscripts are considered in French, German, or Russian. All papers are reviewed, generally by two independent referees. If authors so request in their cover letters, manuscripts will be handled anonymously during the refereeing process. Authors may be asked to respond to criticisms and suggestions by the referees prior to publication.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published, nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communication has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Icarus* represent the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

There are no page charges. However, authors will be charged for color reproduction; the publisher will provide an estimate of cost on request. Fifty *reprints* of each paper will be furnished gratis to the author and additional reprints may be purchased.

*Manuscripts.* **Four copies** of the manuscript, including figures, tables, etc., should be submitted to **Dr. Joseph Veverka, Space Sciences Building, Cornell University, Ithaca, New York 14853, telephone: 607-256-4875.** Authors should retain the original typescript. One of the four sets of figures should be suitable for camera-ready reproduction. All manuscripts must be typewritten with wide margins and **double-spaced throughout,** including references and footnotes. Number each page of the manuscript. Include on the first page the title and the name(s) and affiliation(s) of the author(s), including mailing address(es). At the bottom of this page note the number of manuscript pages, figures, and tables. On the second page indicate a proposed running head of not more than 35 characters, and the name and address to which editorial correspondence and proofs should be directed. The third page should contain a brief abstract, and the text should begin on the following page. Following the main text, give Appendixes, Acknowledgments, references, tables, figure captions, and figures, in that order. Places where figures and tables are to appear in the published paper should be marked in the margins of the manuscript.

*Tables* are to be numbered consecutively with Roman numerals in order of their citation in the text. Each table should be typed, **double-spaced,** on a separate sheet with due regard to the proportions of the printed page. All tables should bear appropriate headings. Unusually elaborate tables should be prepared to allow them to be reproduced in the journal directly without typesetting.

*Figures.* At the time of submission of the manuscript, one original of each figure is to be submitted in such form as to permit photographic reproduction without redrawing: Line glossies should be carefully drafted, no larger than 22 × 30 cm. Both original drawings or standard glossy photographic reproductions are acceptable. The lettering should be large enough to allow a reduction to $\frac{1}{3}$ the original size. **Each figure should be identified with the author's name and figure number.** All figures, whether line drawings or halftones, should be numbered consecutively in Arabic numerals, in order of their citation in the text. Figure captions should be typewritten on a separate sheet, following the text. Color plates and foldouts are published at the author's expense.

*Literature citations in the text* should be in one of the following forms: Morrison and Cruikshank, 1974 (for two authors); Marov *et al.,* 1980 (for three or more authors); Walker, 1977, p. 198 (for reference to a specific page). To distinguish two or more works by the same author(s) in the same year, use suffixes a, b, etc., following the year (e.g., Öpik, 1976a, 1976b).

*Literature citations in the bibliography* should be **listed alphabetically** according to the surname of the (first) author. Journal references should contain the **names and initials of all authors, the year, the title of the article, the standard abbreviation of the journal, the volume number, and the first and last page numbers.** Titles of journals and books should be in italics, volume numbers in boldface. (In a typed manuscript, indicate italics by single underlining and boldface by wavy underlining.) Below are shown examples of the proper reference forms for a journal article, a book chapter, and a book, respectively.

Peale, S. J., P. Cassen, and R. T. Reynolds (1979). Melting of Io by tidal dissipation. *Science* **203,** 892–894.

Zharkov, V. N., and V. P. Trubitsyn (1976). Structure, composition and gravitational field of Jupiter. In *Jupiter* (T. Gehrels, Ed.), pp. 133–175. Univ. of Arizona Press, Tucson.

Whipple, F. L. (1981). *Orbiting the Sun.* Harvard Univ. Press, Cambridge, Mass.

**Careful compliance with these instructions for the preparation of the list of references is required;** manuscripts with incomplete references (or missing abstracts) may be returned to the author for correction before being considered for publication.

*Guidelines for Submission of "Notes"*: Papers on especially topical subjects will be given unusually rapid handling if they satisfy the following limitations on length:

(i) Manuscripts should be typed double-spaced and should be no longer than nine pages, including a very brief abstract of one or two sentences.

(ii) The sum of figures and tables should be less than, or equal to, two.

We expect that ICARUS will publish "Notes" within four months of submission, if no revision is required. We will try to complete refereeing and editorial handling in less than one month. In order to accelerate publication, proofs of "Notes" will be proofread only at Academic Press.

Please write with attention to organization, style, and especially brevity. Present results logically, with order dictated by the needs of the reader. Take special care in composing the title and abstract, since these will be the most frequently read sections of the paper. In the title, specific words are preferable to general ones. The abstract should summarize the conclusions of the research, including quantitative results where appropriate, rather than merely stating the problem.

Whenever possible, quotients in mathematical expressions should employ the solidus (/) rather than being displayed in built-up form. However, for units, exponential notation is preferred (e.g., erg $cm^{-2}$ $s^{-1}$, not erg/$cm^2$s). Most authors will recall the difference between "i.e." and "e.g.," will note that such nouns as "data" are plural and "mare" singular, and will take care to insert a zero before decimal fractions lying between +1 and −1.

*Proofs* will be sent to authors. When submitting a manuscript, the author should include a list of the symbols employed, identified typographically, not mathematically. This list will not be printed, but will help to avoid costly author's corrections in proof. Authors will be charged for excessive alterations in proof.
